e:cue Interfaces

Lighting applications are heterogenous by nature. e:cue interfaces serve to integrate many networks, protocols and third party products into e:cue solutions. They also aid in applying special control functions for fixtures, they integrate analog or mechanical signaling into the digital world and offer bridging functions. e:cue interfaces are the links to bring together the many techniques and technologies of lighting control.

e:cue Bridge8

The e:cue Bridge8 is a Art-Net / sACN to DMX interface. Switch between two input sources on the fly. It comes with 8 x DMX universes over screw terminal plugs. The Bridge makes it possible to run up to 4096 DMX channels (= 1360 RGB pixels, 170 pxl/univ.) over Ethernet. The e:cue Bridge8 supports up to 32 Art-Net / sACN universes. It is especially designed for projects in tough outdoor environments. Connection to the server runs via Ethernet interface with 100 Mbit/s. The Bridge can be powered by an external power supply or via Power-over-Ethernet. It is easily mounted on standard 35 mm DIN rails, or with a key hole in the housing base on walls or on any stable vertical surface.
