ProPoint™ Pixel RGBW Diffused Drum

The ProPoint Pixel RGBW Diffused Drum is an AC line powered, high brightness luminaire. The luminaire is controllable via DMX512 with Remote Device Management (RDM). The system is connected using a daisy chain topology, allowing easy installation to form long run lengths. The ProPoint Pixel RGBW Diffused Drum is ideal for all types of exterior architectural, retail and hospitality applications, providing powerful, vibrant, full-color and white accents and media.

Product Specifications

Model	ProPoint Pixel Diffused Drum
Light Source	4-in-1 LED cluster x 10
Color Range	RGBW (White CCT – 4000K standard) Other White CCT and RGBA available ¹
Viewing Angle	150°
Luminous Flux	402 lm
Efficacy	19 lm/W
Lumen Maintenance	L ₇₀ @ 25° 81,000 hours
Cover Lens	2.5mm UV stable polycarbonate
Housing	Die Cast Aluminum
Size	146 x 117 x 120mm (5.75" x 4.61" x 4.72")
Weight	1.4 kgs (3.09 lbs.)
Regulatory/Product Certifications	cETLus, CE, FCC, RoHS, REACH, ASTM B117-16, ANSI 3G, IK10
Operating Temperature	-30°C to +55°C (-22°F to +131°F)
Minimum Starting Temperature	-20°C (-4°F)
Storage Temperature	-40°C to +80°C (-40°F to +176°F)
Environment	IP66 Outdoor, suitable for coastal environments
Humidity	85%, non-condensing

Electrical Specifications

Input Voltage²	100-277V _{AC} 50/60Hz
Power Consumption	20W
Power Factor	≥0.9

System Specifications

Power	AC Line
Control	DMX512, RDM Enabled
Power Supply	Integrated

1. No MOQ required. Please consult regional sales office for pricing and lead time.
2. Auto-switching. Single phase (line, neutral and ground).

LED CHARACTERISTICS: Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers "sort" LEDs into bins according to different preset parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process always results in different binning distributions according to different production lots. Traxon uses automatically binned LEDs on its products, thereby minimizing output variations within the model range.

As with all electronic devices, LED output degrades over time – a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service life spans to be the same. The rate of LED degrade is a complicated function involving many factors, such as operating efficiency, duration of continuous operation and, more significantly, environmental conditions (ambient temperature for example). If allowed, working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over conventional light sources. When using/installing LED devices, care should be taken to ensure that the devices will operate within the operating conditions specified in respective product literature.

Lumen measurement complies with LM-79-08 standard.
Lumen maintenance is calculated based on LM-80 compliant measurement.

- ProPoint Pixel fixtures ship with two cable whips: One cable whip for power input, consisting of two wires plus a ground, and one cable whip for DMX512 RDM input/output.
- No more than (32) fixtures on a single DMX512 link, max 300m total (source to last fixture).
- Data cabling from DMX source to first fixture and between subsequent ProPoint Pixel fixtures shall be Cat5e UTP or higher (stranded type only) or other cable type suitable for DMX communication. Consult DMX standard for additional guidance.

- Each DMX512 link must be properly terminated to prevent signal reflections.

General Notes

- All data cabling must adhere to ANSI E1.11-2008 (R2013) – Entertainment Technology – USITT DMX512-A, Asynchronous Serial Digital Data Transmission Standard for Controlling Lighting Equipment and Accessories.
- Fixture is RDM capable.
- Fixtures allow a universal input of 100VAC to 277VAC.
- Data termination shall utilize cage clamp terminal blocks, or equivalent. Wire nuts are not permissible and will void warranty.
- The method of line voltage termination, both for data and power, is at the discretion of the installing contractor, and/or engineer. Splicing and/or joining of cables must adhere to all applicable electrical codes.
- Cables must be spliced/joined in a weatherproof enclosure/junction box, which is to be properly rated and provided by others.
