

BUTLER GARAGE

The e:cue Butler Garage is a 19" rackmounting solution for the successful e:cue Butler live and replay unit. The Garage comes with a slot-in system and a built-in multi-range power supply for up to 12 Butler units (24 DMX universes). Frontside access to the Butler display allows viewing status information and gives access to the feature connector for future enhancements.

As Ethernet and DMX outputs are placed on the back, they can be passed to the front by using the passage in the substruction for using the system with a rackmounted Ethernet-switch and DMX Splitter.

KEY FEATURES

- Secure and convenient storage for up to 12 Butler units
- One single multi-range power supply for all units
- Mountable in standard 19" rack systems
- Can be combined with Ethernet switches and DMX splitters in one rack
- Windows for viewing status information
